I. Grant information

The purpose of the Collaborative Initiative for Paediatric HIV Education and Research (CIPHER) Grant Programme is to fund research projects with the potential to address critical research questions that remain unanswered in the global response. The ambition is to support research that can inform policy change and ensure better outcomes in infants, children and adolescents living with and affected by HIV in resource-limited settings. Designed for early-stage investigators, a key aim of the programme is to build research capacity within resource-limited settings by fostering the next generation of investigators in paediatric and adolescent HIV. It is intended to attract young investigators from inside and outside the field of HIV. This will help encourage innovative ideas and lead to the design of evidence-based approaches and interventions to overcome major obstacles in the field.

2022/2023 strategic focus – Mental health

CIPHER has partnered with the World Health Organization to develop global research agendas on HIV testing, treatment and service delivery for paediatric and adolescent populations. CIPHER implements these global research priorities through its grant and fellowship programmes.

Eligible research projects include original research that can contribute to broader scientific efforts by answering parts of larger questions within the identified research priorities, e.g., sub-studies or generation of important preliminary data that can help secure more substantial research funding for paediatric and adolescent HIV research (see Annex J).

II. Eligibility criteria

Any individual with the skills, formal education and access to resources necessary to carry out the proposed research is welcome to submit an application to the CIPHER Grant Programme. The applicant must be the principal investigator (PI) of the proposed project. The PI should work with a mentor, his/her institutional colleagues and partners to develop the research plan.

Eligibility criteria and mandatory supporting documents:

- The PI must be an early-stage investigator, i.e., an individual who obtained her/his terminal research degree (e.g., PhD, MD, MBBS or equivalent) less than 10 years before the application deadline.
- The PI must serve for the first time as primary PI. Primary PIs who have previously received a non-training research grant exceeding US$ 30,000 are not eligible.
- The PI must fulfil one of the following criteria prior to the submission deadline for the Letter of Intent:
  - He/she is a clinical/research trainee (e.g., fellow, senior resident) at an academic institute or an institute whose primary mission is research.
  - He/she has a faculty or comparable position (e.g., assistant professor, lecturer) at an academic institute or an institute whose primary mission is research.
  - He/she has an established position at an organization with adequate research infrastructure to undertake the proposed research activities.
- The research project should demonstrate the potential to contribute to the optimization of HIV diagnosis, treatment and care for infants and children.
affected by HIV in resource-limited settings by responding to identified research priorities (see Annex I).

- Applications are encouraged from any country, however please note that approximately 80% of available funds in any given year will be awarded to applicants from (meaning holding a passport from) low- and middle-income countries (LMICs) according to the World Bank classification.
- The PI must choose a mentor with relevant expertise in paediatric HIV research (mentor’s contact details and a letter of commitment will be requested from all applicants; a mentorship plan will be requested only from shortlisted applicants who are invited to submit a Full Proposal).
- The budget should reflect that at least 80% of the direct grant expenses will be spent in LMICs.
- A letter of support from the applicant’s institution is required, as well as a copy of the applicant’s terminal research degree diploma.

For questions regarding the eligibility criteria, applicants are encouraged to read the frequently asked questions on the CIPHER website. For other questions, contact the programme administrator at cipher@iasociety.org.

III. Funding information

The nature and scope of the proposed research will vary from application to application, and therefore, it is anticipated that the size and duration of each award will also vary. Awards will be funded for up to two years and for up to US$ 150,000 for two years (including direct research costs and applicable indirect costs). Second-year funding is contingent upon demonstration of satisfactory progress during year one. The CIPHER Grant Programme encourages collaborations between different study sites and institutions; at least 80% of the direct grant expenses have to be spent in LMICs.

Additional support will be provided for grantees to attend the IAS Conference on HIV Science and International AIDS Conferences for the duration of their grant period (generally this represents three consecutive years).

The applicant must be the PI who will be solely responsible for planning, directing and executing the proposed project. The grant may be used for salaries, technical support, laboratory supplies, equipment or other research-related costs. The institution of the applicant is requested to provide the research infrastructure necessary to carry out the proposed research project. Requested support for additional equipment and technology must be fully explained in the budget justification (only requested from short-listed applicants) with clear relevance to the scientific aspects of the project, and not merely for general use. An institution’s indirect cost is limited to a maximum of 10%.

IV. Overview and timeline

Application to the CIPHER Grant Programme is a two-stage process. All components of the application must be completed by the PI.

V. Instructions for the submission of the Letter of Intent

Letters of Intent must be submitted no later than 31 October 2022, 18:00 CET. Applicants will be asked to provide a Letter of Intent that briefly outlines their proposed projects, including background, specific aims, preliminary data (if any) and research methodology. The research project must respond to one of the identified research priorities (see Annex I).

The Letter of Intent can only be submitted via email to the following email address: cipher@iasociety.org and in the format provided. Applications failing to provide all the required supporting documents will not be accepted. Only applications in French or English will be considered.

Eligible Letters of Intent will be reviewed by the CIPHER Scientific Committee. Applications will be prioritized based on their ability to demonstrate maximum impact on the optimization of paediatric and adolescent HIV diagnosis, treatment and care and on its potential to inform policy and programmes in resource-limited settings, as well as on collective capacity building in the grantee’s home country and/or research performance sites. Short-listed candidates will be notified in mid-December 2022 and will be invited to submit a Full Proposal. Candidates will have approximately 6 weeks to prepare and submit the Full Proposal. Details and instructions for the preparation of the Full Proposal will be provided upon notification. Applications can be submitted in English or French. Please note that at least one application submitted in French for a research project based in West and Central Africa will be selected.
Annex I: Eligible research priorities

Eligible research projects include original research that falls within defined priority research questions. Meta-analyses and systematic reviews will also be considered if they make unique contributions to the outlined questions.

PAEDIATRIC HIV (infants and children 0-10 years old, including the perinatal and in-utero period, studies on mother-baby pairs and HIV-exposed uninfected children)

Testing
- Optimal placement and timing of novel diagnostic tools for point-of-care use;
- Interventions to ensure timely linkage between HIV diagnosis, treatment and care;
- Interventions or strategies to improve access to and uptake of HIV testing services for infants and children, particularly community-based approaches;
- Factors that enable or hinder linkage to care and timely initiation of ART;
- Effective, feasible and acceptable testing strategies (including routine testing at birth) at entry points other than antenatal care for identifying undiagnosed HIV-positive infants and children in different epidemic settings.

Treatment
- Safety, efficacy, acceptability, pharmacokinetics and optimal dosing of existing and new antiretroviral drugs and formulations, particularly with novel drug delivery systems;
- Strategies or interventions to improve adherence, and factors that impact their success;
- Optimal prevention and clinical management of co-infections, particularly tuberculosis;
- Impact of HIV infection and ART on short- and long-term outcomes, in particular non-communicable disease;
- Short- and long-term virologic and immunologic outcomes of starting very early treatment in infants living with HIV (impact on functional cure).

Service Delivery
- Strategies or interventions to improve access to, uptake of and retention in care, and factors that impact their success;
- Service delivery models to improve individual and programmatic outcomes along the HIV cascade, including integration of comprehensive HIV treatment and care into the maternal and child health platform;
- Psychosocial and family support strategies or interventions to improve individual and programmatic outcomes;
- Strategies or interventions to improve and support parents, caregivers and healthcare providers to facilitate HIV disclosure to children, as well as factors that impact their success;
- Strategies or interventions to reduce stigma and discrimination experienced by children and their caregivers.

ADOLESCENT HIV (from 10 to 19 years old)
Testing

- Strategies and interventions to improve access to and uptake of HIV testing services, and factors that impact their success;
- Strategies and interventions to improve linkage of newly diagnosed adolescents to HIV treatment, and factors that impact their success;
- Safe and acceptable strategies or interventions to improve access to and uptake of HIV testing services for adolescents from key populations;
- Consent policies and practices to facilitate access to and uptake of HIV testing services in adolescents;
- Safety, acceptability, feasibility and effectiveness of self-testing.

Treatment

- Effective monitoring approaches and strategies to improve adherence among adolescents and factors that impact their success;
- Safety, efficacy and acceptability of novel drug delivery systems;
- Prevention and clinical management of co-infections, particularly tuberculosis;
- Optimal sequencing of ART in adolescents;
- Impact of HIV infection and ART on short- and long-term outcomes of adolescents, in particular non-communicable diseases.

Service Delivery

- Interventions to improve retention in care and factors that affect their success;
- Strategies or interventions to improve sexual and reproductive health outcomes in adolescents living with HIV;
- Strategies or interventions to support pregnant adolescents living with HIV and improve both maternal and child health outcomes;
- Service delivery models to improve outcomes along the HIV cascade, including peer interventions, and differentiated service delivery models;
- Psychosocial support strategies or interventions to improve individual and programmatic outcomes.
